3.57 / 4.0

Yönetim Bilişim Sistemleri

Selcuk University

09/2025 - Present konya, Turkey

EXPERIENCE

Frontend Developer (Intern)

NovaDSA

07/2023 08/2023 Istanbul, Turkey

PROJECTS

AgroPulse

github.com/deniizeynep/agropulse-app

- This project is designed to continuously monitor plant health and environmental conditions in real-time.
- It features a smart pot system that tracks moisture and temperature levels, transmitting this data directly to a mobile application for easy tracking.
- In this project, I used ESP32 microcontrollers, environmental sensors, and mobile application development tools.

Afet Yönetim Sistemi | AYS

github.com/afet-yonetim-sistemi/ays-fe-institution

Volunteer (Frontend Developer)

- It is a project where we produce technical solutions for the safe and healthy delivery of post-disaster aid.
- In this project, we use React, TypeScript languages and Ant-Design library on the frontend side

Risk Based Authentication | RBA

github.com/risk-based-authentication

Frontend Developer

- AWS Cloud Technical Bootcamp is a risk-based authentication project that we presenting as a final project.
- I used React, TypeScript languages and Ant-Design library on the frontend of this project.

Zeynep Deniz Portfolio WebSite

github.com/deniizeynep/zeynepdeniz-portfolio-website

https://zeynepdeniz-portfolio-website.vercel.app/

- This project is designed to serve as my personal portfolio, showcasing my software development projects and professional background.
- It features a modern, fully responsive design that highlights my coding journey and provides an optimized user experience for visitors to explore my work.
- In this project, I used React and Tailwind CSS from frontend tools to build a dynamic, fast, and visually appealing user interface.
